

Question # 1:

Will this effort be a small business set aside?

Answer:

Unknown at this time. Current market research supports full and open competition.

Question #2:

Are visits to the DOE Environmental Management Consolidated Business Center for purposes of discussing the sources sought allowed/desired?

Answer:

The preferred method of discussion is via e-mail. All questions raised, by any method of communication, will be recorded and formally answered on the LLW/MLLW Treatment web site.

Question #3:

Are the items outlined under the 2008-2010 for TSCA incineration attachment #2 (TSCA Burn Plan) radiologically contaminated or straight TSCA, therefore able to go to any licensed TSCA incinerator?

Answer:

A vast majority of the items are contaminated with both radiological constituents and PCB's, or come from a Radiological Control Area. However, there are a few waste streams (some large volume) that are PCB contaminated with only a slight radiologically contaminated level. There may be an opportunity to get these waste streams approved for "Authorized Release" for treatment at any licensed TSCA incinerator.

Question #4:

Is the subject Sources Sought Notice for processing only:

- * Radioactive PCB waste
- * TSCA waste
- * Mixed Low Level Waste

There are indications in the solicitation that it may include standard Class A Low Level Waste but it is not clear to me.

Answer:

The Department is requesting information on the treatment capabilities of contractors for all types of Mixed LLW and Class A Low Level Waste. As a reminder, this is not a solicitation, rather a request for information.
